

Second-stage Scarborough Success!

Britspace has successfully completed the 1st floor extension to Scarborough Hospitals new Clinical Skills Building, the scheme started full factory production on the 15th March 2010 and was handed over early July 2010. The new extension which is situated on top of an existing Britspace built building will be used for training new graduate doctors. Internally the building is designed to replicate a fully working ward with ancillary offices, stores and consultation rooms. With the building below requiring all year round use, speed was critical to reduce the impact on the surrounding facilities. Britspace delivered and craned in all their modules over 1 weekend and completed all internal works within 6 weeks.

This scheme highlights Britspace's flexibility in design and build, key to the project was the ability to replicate the existing ground floor footprint both internally for services but also externally for appearance, Scarborough Hospital is extremely impressed with the facility and commented that the guaranteed program, cost and quality meant that in the current climate of uncertainty, the commercial risks were less and overall the project ran smoother than that of a traditional scheme.

"I wanted to put on record our appreciation of your sterling work during the construction of the new clinical skills training facility....your professionalism, courtesy and excellent communication skills have been much appreciated.....you have been accessible and responsive to all manner of queries and requests....it has been a delight to work with you" Anne Britton and Ed McCormack, Scarborough Hospital
